

Description

MM-GB2 is a video memory module for GB2 systems from Golmar. MM-GB2 records 10 seconds video from the door panel's incoming call. Allows recording from the panel's camera which is in communication. In a system it is necessary just one module for all users, reducing the overall cost. Each user will be able to check their own records, not being possible to access to other user's records. MM-GB2 has a video composite output together with a trigger signal and a dry contact relay which can be activated from the monitor during a preset time.

GB2 is a pure 2 wires solution, the perfect system for villas and medium size buildings up to 22 apartments*. The system is very convenient for retrofit, thanks to its full digital transmission of audio, video and data, what makes it suitable for any type of wires. The system's wiring is not polarized, becoming GB2 an easy-to-install intercom solution. Reach its maximum performance using RAP-2150 cable and reach up to 160 meters from the entrance panel to the last monitor.

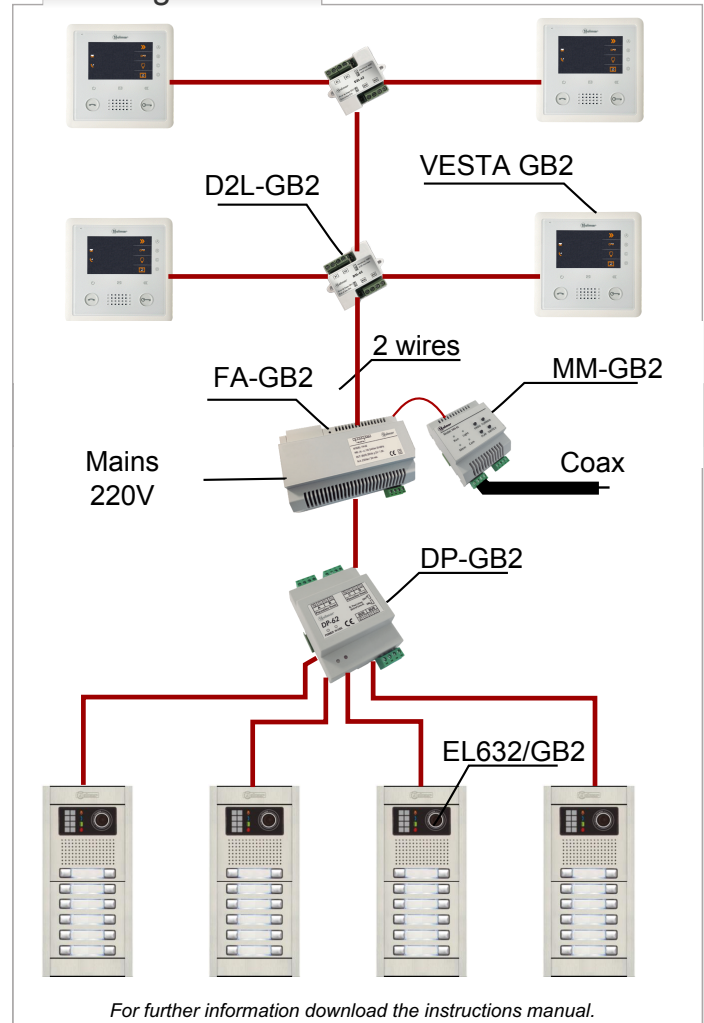

Dimensions: 72 (W) 100 (H) 60 (D) mm

Features

- Records 10 seconds video from the calling panel.
- Possibility to manually record the video streaming from the panel which is in communication.
- Composite video output.
- Trigger signal to activate an additional device, active during video recording.
- Test buttons to reproduce the video recordings and check them from the composite video output.
- Dry contact relay, to be activated from the monitor.
